b. 1983, Boston MA

Blending craft with technology, Jason Krugman works to discover new ways of arranging electricity in three dimensions. His sculptures often use their physical structure to conduct electricity allowing thousands of lights to sit softly amongst minimal wire forms.

Jason Krugman Studio is a tech-forward art and design studio providing bespoke illuminated sculptures and design solutions for the built environment. For 10 years, Krugman has worked to develop new ways of using LED and low voltage electricity. The studio leverages its proprietary systems to create new and beautiful artworks for both commercial and residential spaces, steadily taking on larger and more challenging projects since its inception. Krugman holds two US patents, has multiple UL-certified LED systems, and has completed permanent installations in the United States, Asia and Europe.
